

March 2020

Hello,

I am writing to technical clubs and organizations announcing our new technical tour program for this former Voice of America Bethany Station transmitting plant. The facility used high power shortwave transmitters to send news and information about America around the world. Over the past two years we have enhanced the museum to be an outstanding educational experience for technical and non-technical people.

When your group is looking for a fascinating and technical road trip, we would be happy to accommodate.

Our normal hours are every Saturday and Sunday, 1-4 PM.

However, if your group is 15 or more, we can conduct a pre-arranged private tour during most weekdays.

Also, many organizations find this tour qualifies for CPD* and CPE* credits.

See the attached invitation for additional details.

Admission is \$10/person.

Please let me know if you would like a technical tour and your preference, so we can arrange visit details and have engineer/technicians on duty as tour guides.

Feel free to pass along this invitation to other technical organizations in your area.

Kind regards,

Leland Hite
